Detailed Action

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In Claim 11, line 22: "claim 7 and 9" is changed to "claim 7 or 9".

Reasons for Allowance

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

This application is for an integrated actuator-carriage arm and suspension system for a hard disk drive information storage system-that can be an internal or an external drive.

Claim 1 specifies an integrated actuator-carriage arm and suspension system for a hard disk drive information storage system-that can be an internal or an external drive, which requires:

"...read/write heads-where each read/write head is on the two sides of a continuous surface contact micro-pad, all supported by said actuator member for controlled precision movements in conjunction with said actuation member, movement of said member by said actuator corresponding to movement of said read/write heads adjacent and in a direction that is linear motion-tangential to data tracks, but conforming to approach angle of the arcs of said magnetic surface data tracks as a function of actuator geometry to said disk from said axis,..."

These features, in combination with the other features of Claim 1, are not anticipated by, nor made obvious over, the prior art of record.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The closest prior art is Dunn et al (US 20020149867 A1) but does not show read/write heads-where each read/write head is on the two sides of a continuous surface contact micro-pad, all supported by said actuator member for controlled precision movements in conjunction with said actuation member, movement of said member by said actuator corresponding to movement of said read/write heads adjacent and in a direction that is linear motion-tangential to data tracks, but conforming to approach angle of the arcs of said magnetic surface data tracks as a function of actuator geometry to said disk from said axis.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Blouin whose telephone number is 571-272-7583. The examiner can normally be reached on M-F from 6:00 to 3:30 pm.
